

Requirements and Specification, ESOF 328, Spring 2022
Tools for requirements engineering, Chapter 30

1. The chapter “Tools for requirements engineering” listed 2 large categories of requirements tools. What are these categories?
2. This chapter discussed types of requirements development tools. List two tools for requirements development which you expect to be particularly helpful for our project.

Tools that I think would be particularly helpful:

Audio pens (for elicitation)
Mock up tools (for prototyping)
Umbrello (for UML modeling)

3. This chapter also listed ten benefits of requirements management tools. List two benefits which you expect to be particularly helpful for our projects.

The two biggest benefits I see:

- Tracing requirements from business rules or use cases, or to implementation
- Helping with versions and changes
